

**GC51 Pressure Transmitter**

This transmitter is 2-wire type and it is one of the product series for which SS sensors are used to the pressure sensing part. Consideration against the environment are taken into and the indicating part has become small in size, therefore, the applications such as airconditioning systems in the buildings, the controlling facilities for the energy savings and the control units for the plant facilities, are considered. You can apply the various industries with this model.

**GC52 Differential Pressure Transmitter**

[GC52-112]

This product is the differential pressure transmitter for gas, liquid measurement, it can be used in the outdoor and product contributes to the reduce labor of the establishment construction in that it is light-weight and the compactness of it. This product corresponds to the wide industry use of the building air-conditioner process, the factory facilities, the environment process and so on.

**Intrinsic Safety Explosion-Proof Construction Type**

**KJ91**  
GC51 Intrinsic Safety  
Explosion-Proof  
Construction Type

**KJ91•92  
Pressure & Differential Pressure  
Transmitter**

Conforming to the IEC specification of Intrinsic safety explosion-proof construction, they can be Used in "ZONE 0" places where explosive gas always exists. (Explosion class:Exia II CT4) Combining these products with GC51 and GC52 of non-explosion proof specification, you can measure a wide range of pressure and differential pressure, from micro pressure to high pressure, in Industrial process. Please refer to individual catalogs.

**KJ92**  
GC52 Intrinsic Safety  
Explosion-Proof  
Construction Type

**GC15•16 Precision Digital Pressure Gage**

**GC15** For gas measurement

(0 to 100Pa → 0 to 50kPa, Compound is available)  
Silicon capacitance pressure sensor is used, and GC15 is adequate to measure the low differential pressure precisely. And it offers the various applications because it is high pressure-resistant.

**Pressure unit and display**

	Pressure range				Pressure range		
	Pa	kPa			Pa	kPa	
Differential pressure	0 to 100Pa	100.0	0.1000	Compound	±100Pa	100.0	0.1000
	0 to 200Pa	200.0	0.2000		±200Pa	200.0	0.2000
	0 to 500Pa	500.0	0.5000		±500Pa	500.0	0.5000
	0 to 1kPa	1000.0	1.0000		±1kPa	1000.0	1.0000
	0 to 2kPa	2000.0	2.0000		±2kPa	2000	2.000
	0 to 5kPa	5000	5.0000		±5kPa	5000	5.000
	0 to 10kPa	10000	10.0000		±10kPa	10000	10.000
	0 to 20kPa	20000	20.0000		±20kPa	20000	20.00
	0 to 50kPa	50000	50.00		±50kPa	50000	50.00

**GC16** For gas and liquid measurement  
(High-precision ±0.07% F.S. on request.)

(0 to 200kPa, 0 to 35MPa, -100kPa to +100kPa → -100kPa to 2MPa)  
This model is available for measuring gases and liquid, because using semiconductor pressure sensor of stainless steel diaphragm. And it is high pressure-resistant type.

**Pressure unit and display**

	Pressure range		kPa	MPa
Differential pressure	—	-100 to 100kPa	100.0	0.1000
	0 to 200kPa	-100 to 200kPa	200.0	0.2000
	0 to 0.5MPa	-0.1 to 0.5MPa	500.0	0.5000
	0 to 1MPa	-0.1 to 1MPa	1000.0	1.0000
	0 to 2MPa	-0.1 to 2MPa	2000.0	2.0000
		0 to 5MPa	5000	5.000
		0 to 10MPa	10000	10.000
		0 to 20MPa	20000	20.000
		0 to 35MPa	35000	35.00

**GC15•16 Common spec.**

- Pressure measurement and Voltage/Current measurement. • Pressure measurement and Voltage/Current signal output function.
- Pressure measurement and switch operation check and electrical resistance measurement. • 2-way power source: Build-in battery and AC100 to 200V.
- Interface: RS-232C (Standard) or GP-IB (Option). • Average function. • Measurement data memory function. • Compact and light weight.

# Digital Pressure Gauge

## GC Series Line UP

## Pressure sensing elements

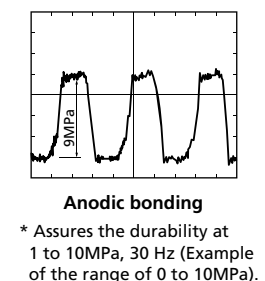

**SC Sensor**  
Silicon Capacitance Sensor  
range :  
0 to 50Pa → 0 to 50kPa, ±50Pa → ±50kPa

The SC sensing element is a differential fine pressure sensor to detect the pressure by the change in capacitance between the diaphragm and the electrode. The silicon diaphragm is processed to the order of microns utilizing the state of the art micro-machining technology.

**SS Sensor**  
Semiconductor Strain Gauge Sensor  
range :  
-0.1 to 0.3MPa → 0 to 200MPa

In this semiconductor strain gauge sensor, a strain gauge is deposited by plasma CVD on a metallic diaphragm and on insulator film. This pressure sensor detects the change in resistance is produced by displacement of diaphragm due to pressure of fluid.

## Seven points of GC Series \*Exclude GC63/64, GC50: partially-covered

### Point 1: Scaling function

Free range application is possible by the highly display and output scaling.

**Display scaling function**  
LED display can be set as arbitrary values Within the limit of a 4 figure display. (\* Maximum display depends on model)

**Analog output scaling function**  
Scaling of the analog output can be arbitrarily carried out to a full-scale display with the limit of a maximum display.

### Point 2: Loop checking function

By the loop checking, display and outputs can be manual tested with up and down keys operation regardless of impression pressure. It is suitable for the simulation operation of a wiring check etc.

Example of loop checking: Without pressurizing a sensor, output signal can be manual outputted.

### Point 3: Comparator function

About the comparator output, two relay points of contact are carried. According to a use, two kinds of operation modes can be chosen freely.

**[Hysteresis mode]**  
When OUT1 is set as maximum and OUT2 is set as minimum.

**[Wind mode]**  
When OUT1 is set as maximum and OUT2 is set as minimum.

Either one of two

The Upper limit of OUT1 and OUT2 (positive the dead band) and lower limit (negative the dead band) can be set at any value.

ON Delay and OFF Delay can be set to the above-mentioned, set value.

### Point 4: Filtering function

The digital filter is built in. It is useful, when pressure change is hard and a display is hard to see. Select (OFF, 25ms, 250ms, 2.5s, 5s, 10s)

### Point 5: Zero-adjustment function

Zero can be easily set by using ADJ. key when the pressure port is released to the atmosphere.

### Point 6: Holding function

The peak and bottom value of measured are memorized. It displays, while pushing up and down keys.

### Point 7: Key-locking error message function

An error message is displayed when outside of the zero adjustment, excessive pressure is applied, key lock function for avoiding incorrect operation.
