- Avoid installation in places exposed to places that excessive vibration, dirt, dust, corrosive atmosphere, and direct sunlight are present.
- ●Ensure to install the deadweight tester horizontally. If not installed horizontally, the test result may not be accurate.
- ●Do not try to increase or decrease the pressure suddenly. (Ensure to open and close the valves slowly.)
- Applying a pressure over the maximum allowable pressure on PD73 is not only dangerous but possibly damage the tester.
- ●The deadweights are precisely manufactured. Do not fabricate with sandpaper or drop them.
- ●Use a tank siphon to calibrate "Use no oil" pressure gauges and be sure that oil does not ingress into pressure gauge under test.
- •Use clean hydraulic oil. Refer to the following operating oil below.

#### Max. pressure Operating oil

1 to 5MPa: Machine oil (VG8) 10MPa: Machine oil (ISO VG22) 20 to 50MPa: Machine oil (ISO VG46)
